MILLION**  
in investments

**BRL 684.6  
MILLION**  
in taxes paid

**7,000**  
Direct and  
indirect jobs

**BRL 20  
MILLION**  
in social investment

**BRL 2.1  
BILLION**  
in local  
procurement in  
Brazil

ANGLOGOLDASHANTI

## OUR BUSINESSES

- **Gold:** our main area of operation. We produced 476,000 ounces, which is equivalent to about 15 tons, in 2020.

- **Sulphuric Acid:** part of the gold extraction process at the Queiroz metallurgical plant, in Nova Lima (MG), releases sulphur dioxide (SO<sub>2</sub>), which is used to produce sulphuric acid. We produced 198,000 tons of sulphuric acid in 2020.

- **Energy:** we invest in energy self-generation to make our business even more sustainable. About 20% of the energy consumed in 2020 was generated by the company.

- **Real estate:** AngloGold Ashanti currently has 20,800 hectares of land. Of these, 18% are destined to real estate development and social housing projects, and 53% are set aside for environmental conservation.

## WHAT IS THE OZ MEASUREMENT?

# OZ

The ounce, whose symbol is oz, consists of a unit standard to express

physical quantity of mass. In the case, of precious metals, such as gold, the troy ounce is used, which is equivalent to 31.1035 grams.

## DAMS AND DRY STACKING

We have seven tailings dams in Brazil, all of them safe and with dam stability assurance, in compliance with the law.

The company is also in the process of implementing a dry stacking system in all its units. We expect that 100% of tailings will be stacked dry by 2022, eliminating the disposal of tailings in dams.

## RESPECT FOR THE ENVIRONMENT

### TOTAL PROTECTED AREA

11,000 hectares, equivalent to 15,000 football fields

15,000 hectares around Serra da Piedade (MG) alone

**REVEGETATION**  
more than 309,500 seedlings planted and donated

**FAUNA AND FLORA**  
conservation of over 500 species
