direct and indirect jobs

**R\$ 20 MILLION**  
of social investments

**R\$ 3.07 BILLION**  
of local procurement

ANGLOGOLDASHANTI

## OUR BUSINESSES

- **Gold:** our main business. We produced 414 thousand ounces in 2021, which is equivalent to about 13 tonnes.

- **Sulphuric acid:** sulphur dioxide (SO<sub>2</sub>) is released as part of the gold extraction process at Queiroz metallurgical plant, in Nova Lima (MG), which is used for the production of sulphuric acid.

- **Energy:** we invest in self-produced energy to make our business even more sustainable.

- **Real estate:** AngloGold Ashanti currently has 20.8 thousand hectares of land. Eighteen percent is allocated to real estate projects, including areas for development and for social use, and 53% is for areas of environmental conservation.

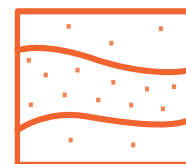

## DAMS AND DRY DISPOSAL

We have seven dams in Brazil, all of which are safe and have statements of dam stability, in compliance with the law.

The company is also in the process of implementing the dry stack method in all of its units.

Our expectation is that 100% of the tailings will be dry stacked by 2022, eliminating the disposal of wet tailings in dams.

## RESPECT FOR THE ENVIRONMENT

### TOTAL CONSERVATION AREA

11 thousand hectares, equivalent to 15 thousand football fields

1,500 hectares in the vicinity of Serra da Piedade (MG) alone
